## DETAILED ACTION

### *Drawings*

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the absolute value of the input signal recited as used in claims 7-12 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet"

or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

3. The disclosure is objected to because of the following informalities: On page 6, line 14 it is the opinion of the examiner that " a look-up table 14" should be – a look-up table 114 -.

Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 5,745,006 to Budnik et al.

6. Regarding claim 1, Budnik disclose a method of compensating for distortion in an amplifier that has a subtracting means, 6, that generates a difference signal between an input signal and the output signal of the power amplifier. That difference signal is then coupled to an adding means, 8, through an amplifier that inverses the signal, generating an error signal, which is then added to the input signal to generate or extract a predistorted signal to input to the power amplifier, 3, for linearization. Figure 2 shows this as well as the corresponding description of figure 2 in the reference.

Art Unit: 2817

7. Regarding claim 3, which inherits all of the limitations of claim 1, it is inherent that the subtracting means, adding means and inverse means could be viewed altogether as being a part of a digital signal processor, especially since predistorter 22 is disclosed as a conventional digital signal processor (DSP) at column 2, lines 39-43.

*Allowable Subject Matter*

8. Claims 2 and 4-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. Claim 7-12 are allowed.

*Conclusion*

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. US Patent No. 6,703,897 to O'Flaherty et al. discloses a method of optimizing power amplifier efficiency and closed-loop power amplifier controllers.

b. US Patent No. 5,770,971 to McNicol discloses a distortion compensation control for a power amplifier.

c. US Patent Application No. 2003/0058959 to Rafie et al. discloses a combined digital adaptive pre-distorter and pre-equalizer system for modems in link hopping radio networks.
